

# The cost of council elections

---

Jonathan Eida

January 2025

## Introduction

Local authorities in England can, within statutory limits, determine their electoral arrangements. All councils must hold elections in four-year cycles, but many can choose whether to elect councillors all at once every four years, half the councillors every two years or a third of councillors in three years out of every four. These options are available primarily to district, metropolitan and unitary councils. Other authorities, such as London boroughs and county councils, however, must hold whole council elections every four years and cannot adopt elections by thirds or halves.<sup>1</sup>

Each electoral model carries distinct implications for cost, stability and democratic engagement. Elections by thirds can promote continuity by ensuring that only a portion of councillors are up for election at any one time. This reduces the risk of a dramatic shift in the council's political makeup, allowing for more gradual change and longer-term financial planning. It also offers residents more frequent opportunities to influence local decision-making and hold councillors to account, potentially increasing the responsiveness of local government. This system can help insulate councils from sudden national political swings, fostering more consistent governance.

Whole council elections, on the other hand, offer a different kind of stability. By electing all councillors simultaneously, councils can implement longer-term plans without the disruption of annual elections. This model enhances democratic accountability by enabling residents to assess councillors on their performance over a full term, rather than on partial or staggered mandates. It also simplifies communication between councillors and voters, as all councillors will campaign under the same political conditions and manifestos. Furthermore, reducing the frequency of elections can ease voter fatigue and could result in higher turnout, which is typically around 30 per cent in local elections,<sup>2</sup> when voting does occur.

From a financial perspective, whole council elections are generally less expensive to administer than elections by thirds or halves. Fewer election events mean lower recurring costs for staffing, venues, printing and voter communications. In a period of intense financial pressure on local authorities, with a growing number issuing section 114 notices,<sup>3</sup> these savings could be significant.

This note examines the cost of different electoral cycles in local authorities excluding by-elections. While each system has merits, councils must consider whether the benefits of more frequent elections justify their additional financial burden on residents.

## Key findings

- As of 2025, **283** councils elect their councillors by whole elections, **91** elect by thirds and **7** elect by halves.
- If councils that held elections in halves or thirds had instead held whole council elections between 2021 and 2024, they could have saved almost **£25 million**.
- **Leeds** had the highest total costs over the four-year period between 2021 and 2024, spending over **£3.1 million** on **three** elections. The council elects its member in thirds.

- **Croydon**<sup>4</sup> who elect councillors in whole elections, had the highest singular election cost between 2021 and 2024, at **£1,282,044** for an election held in **2022**. The cost per councillor elected was **£18,315**, the **12<sup>th</sup> highest** of any council.
- Of councils that elected in thirds or halves, **Leeds** had the highest average election cost, averaging **£1,048,920** per election across the four-year period between 2021 and 2024.
- **Coventry** had the highest cost per councillor elected between 2021 and 2024, with an average cost of **£38,839** for each of the **54 councillors** elected.
- The average cost per election cycle for a **district council** electing by thirds between 2021 and 2024 was **£455,221** per election cycle. In comparison, district councils electing in whole elections averaged **£201,566**.
- Between 2021 and 2024, **metropolitan district councils** electing in thirds averaged **£1,170,951** per election cycle, while those with whole elections had an average cost of **£285,842** per cycle.
- **Unitary councils** electing in thirds between 2021 and 2024, had an average election cycle cost of **£686,705** while councils electing in whole elections averaged **£379,580** per cycle.

## Data

## Methodology

The cost of each council election was collated through freedom of information requests sent to all councils in England, Wales, Scotland and Northern Ireland. Local authorities were asked:

*"Please provide between January 2021 – December 2024:*

- *How often local election cycles are held excluding by-elections. For example, the full council is elected every four years or a third of councillors are elected every year except the county council year.*
- *The year or years local elections took place in the latest cycle since 2021 excluding by-elections. For example, if there is one local election where all councillors are elected once every four years then provide the year in which that election was held. If councillors are elected by thirds over a four-year period then provide all years within the time period that these elections took place in the latest cycle to elect all councillors.*
- *The total cost of each local council election held excluding by-elections broken down by election. For example, if there is one election where all councillors are elected once every four years then provide the cost of running that election. If councillors are elected by thirds over a four-year period then provide the costs for each of those three elections in the latest cycle."*

Some councils provided the cost of their elections including, where relevant, either parish council, police and crime commissioner, fire authority, mayoral and county or district elections. Councils were asked to exclude these costs although in some cases this was not possible. In such instances, a note has been made. Where other elections have been included, the cost of the elections tend to decrease as the costs are shared across multiple bodies.

Of the 381 councils requests were sent to, 300 responded with usable data. Of these, 75 stated either that they could not separate the cost of the multiple concurrent elections or simply that there were same day elections, but did not specify if the figure they provided excluded the cost of other elections.

On several occasions, councils produced a nil response as the returning officer was not subject to the freedom of information requests. Meanwhile, some councils that held elections in 2024 have not been able to produce a total cost for the election.

Numerous councils refused to respond under section 12 of the Freedom of Information Act stating the costs of complying with the request would exceed the limit set under the Act. In total, 78 councils either did not respond, stated an exemption or did not provide adequate data.

Because of the coronavirus pandemic, councils that were meant to hold elections in 2020 delayed them until 2021. These elections have been excluded from the data as the aim is to capture the cost of an election cycle. Including these delayed elections would have distorted the data as these elections were scheduled outside of the cycle analysed.

On occasion, councils that normally elected in thirds held "all out elections" which saw the whole council being up for election. This was due to boundary changes. This data was included in the paper, and notes have been made in the dataset accordingly.

Two councils changed their election cycles during the period specified in the freedom of information request, changing from electing councillors in thirds to whole elections. In these instances, only the whole council election was included.
